

Sinomine Specialty Fluids

Twenty years of continued service on the Norwegian Continental Shelf 2000–2020

Through their use in a wide range of applications, cesium formate fluids have enabled operators to reduce risk, simplify challenging operations and deliver gas and oil wells with enhanced production.

Over twenty years, cesium formate fluids have been deployed on:

Huldra, Visund, Tune, Kristin, Statfjord, Statfjord Satellites, Snorre, Njord, South Arne, Kvitebjørn, Valemon, Gullfaks, Gullfaks Satellites (Sør, Rimfaks, Gullveig), Victoria, Vega (North, Central and South), Snadd, Oselvar, Eldfisk Bravo, Knarr, Ekofisk, Morvin, Ravn, Brynhild, Gudrun and Martin Linge.

In the following applications:

Drill-in fluids, screen-running fluids, gravel- and frac-pack fluids, perforation pills, low-solids completion fluids, clear brine completion fluids, slug pills, hydrate dissolution pills, internal phase in LSOBMs/RSOBCFs, long-term suspension pills, workover fluids and intervention fluids.

Density range: 1.48–2.24 g/cm³
